

Face powder

with sun protection SPF 10+ (approx. 100g)

Ingredients:

- 8.00g Mica LL
- 8.00g RonaFlair® Low Chandelier
- 5.00g RonaFlair® LDP White
- 7.00g SunZinc
- 1.20g Pigment Yellow, CI 77492
- 0.20g Pigment Red, CI 77491
- 0.30g Pigment Brown, CI 77499
- 2.00g Magnesium Stearate
- 65.90g Sericite

How to do:

RonaFlair® LDP White works in combination with mineral sun protection like an LSF amplifier, so that the protection is much higher than without this filler.

Mix all powders well.
Either in a small grinder
or in a food processor*.
Finally, swirl the whole
thing with the tocopherol
and the oil again vigorously.

Of course you can adapt the colour pigments to your own wishes. In summer a little Colorona® Oriental Beige gives the skin a soft tinge.

The result is a light, almost transparent powder,
that still gives you a little protection from the sun during the
"today I don't want to ham" phase.
Or simply apply as a finish.

*For this purpose, you might buy an electric coffee machine from Cloer, for example.
Only pigments will be mixed in this machine.
