

Lip care stick

with SPF 20+ (100g)

Ingredients:

- 57,70g Jojoba oil
- 23,00g Beeswax
- 3,80g Fluidlecithin Super
- 5,80g Vitamin E Acetates
- 7.70g SoFiTix Broadband
- 2.00g RonaFlair® LDP White

How to do:

Melt the fats and then carefully stir in the pigments. If the pigments are well mixed, simply pour into a lipstick mold and allow to harden well.

Thanks to the lecithin, the pigments do not settle. This ensures even distribution in the fat phase and you receive sun protection right from the start.

RonaFlair® LDP White works in combination with mineral sun protection like a LSF amplifier, so that the protection is much higher than without this filler.
